#### UPON ARRIVAL

unpack and place roots in bucket of water. Never for a minute expose them to drying air or sun. If they

seem dry, leave them in water for a few days before planting. Unless the soil is actually frozen you can plant roses any time now even when the weather is cold and rainy.

DIG IT DEEP!

Rose bushes need lots of room. Hole should be 21/2' deep where it is well drained. Next build a cone

of good topsoil at the bottom of the planting hole. Carefully spread roots out and down over the cone in their natural growing position, sifting soil in around each root to prevent air pockets.

TAKE SAME CARE

when you fill in the hole that you leave no air pockets. Use lots of water around the cone and then

gradually fill with good soil to within about 6" from the top. Tamp the soil all around (if it's rainy and wet wait to firm 'til it dries a little).

**FLOOD IT AGAIN** 

after a day or two when the soil has settled. Then fill to the top with a loose, light soil. Go back and firm

the soil around the new planting for a few weeks . . . and if it's very cold and apt to freeze, give them a light mulch to prevent heaving.

**SUMMER JOBS** 

in your rose garden include regular and frequent spraying or dusting; taking care always that both

sides of the leaves are covered! Very light cultivation . . . and deep-down irrigating in the mornings throughout the summer will keep the growth healthy and new flowers coming.

WHEN YOU CUT

roses for bouquets, use a very sharp-bladed clipper. A clean, slanted cut will not bruise the stem.

Cut just above the second leaf-twig from the next branch fork. This will leave sufficient strength for continuous vigorous growth . . . and assure more blossoms for your bouquets all season.

# Oregon's Best Source of Good Roses

Budded to a PD super strain of multiflora root stock and grown under exacting care in the PD rose fields at Scappoose, Oregon.

The Rose is the favorite flower of all ages. It grows to hardy and perfect form in the lower Columbia River area of Oregon where pure air, fertile soil and a long growing season are ideal for Rose culture. As this hardy stock approaches maturity it continues to thrive when transplanted anywhere in the Northern Hemisphere. Supplied with deep rich soil, ample water and protection during freezing weather, an Oregon-grown rose will reward its owner with an abundance of beautiful blooms. A super strain of multiflora root stock makes PD field grown Roses more hardy. They produce sturdier and more beautiful bushes under any reasonable growing conditions.

TERMS: Cash with order. Send check or money order. No orders sent C.O.D.

PLANT LOSSES: Tell us immediately if the plants you receive are unsatisfactory. It is our desire to make a fair adjustment and to help you in getting the best possible results. When the instructions which we send with every shipment are carefully followed, only very rarely should you lose a plant. Every effort is made to get all plants to you in excellent condition because our success depends upon the results you have.

OUR GUARANTEE: If you follow the simple steps outlined here in the planting guide and the planting instructions mailed free with every shipment, and providing weather is not abnormal or there are no damaging factors beyond our control, we will replace without charge any rose which fails to grow and bloom in your garden providing the bush is returned to us before July 1st following purchase season.
